PROFESSIONAL SUMMARY

Entry-Level ETL and Data Warehouse Developer with hands-on internship experience in SQL Server, Advanced SQL, Data Warehousing, SSIS, ETL processes, and job monitoring. Skilled in SQL development using Stored Procedures, Functions, Views, Temporary Tables, CTEs, Joins, and complex queries. Strong understanding of Data Warehouse concepts including staging tables, dimension tables, fact tables, surrogate keys, fact table grain, and Star Schema design. Experienced in understanding ETL data flows, monitoring job execution, identifying failures, and validating data loads. Also proficient in Python, Pandas, NumPy, Matplotlib, Seaborn, and Scikit-learn, with hands-on experience developing and deploying a Machine Learning application.

TECHNICAL SKILLS

Programming: Python, SQL

Database: Microsoft SQL Server, SQL Server Management Studio (SSMS)

SQL Development: SQL Queries, Joins, Subqueries, CTEs, Window Functions, Aggregate Functions, Stored Procedures, Functions, Views, Temporary Tables, MERGE, Transactions

ETL & Data Warehousing: SQL Server Integration Services (SSIS), ETL Development, Data Extraction, Data Transformation, Data Loading, Staging Tables, Dimension Tables, Fact Tables, Star Schema, Surrogate Keys, Fact Table Grain, Slowly Changing Dimensions, Data Validation, Data Flow

Job Monitoring: ETL Job Monitoring, Job Execution Monitoring, Job Status Checking, Failure Identification, Data Load Validation, Basic Job Failure Investigation

Python Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Machine Learning: Data Preprocessing, Data Cleaning, Feature Engineering, Feature Scaling, Classification, Cross-Validation, Hyperparameter Tuning, Model Evaluation

Tools: SSMS, SSIS, Visual Studio, Jupyter Notebook, VS Code, Git, GitHub, Streamlit

INTERNSHIP EXPERIENCE

ETL / SQL Developer Intern

Project-Oriented Internship Training At Jasp Labs

April 2026 – Present

Visakhapatnam, Andhra Pradesh

- Built practical knowledge of SQL Server and Advanced SQL, including queries, joins, subqueries, aggregations, CTEs, Stored Procedures, Functions, Views, Temporary Tables, and analysis of complex SQL queries.
- Applied Data Warehousing concepts including staging layers, dimension tables, fact tables, Star Schema, surrogate keys, table relationships, fact table grain, and end-to-end data flow.
- Learned and applied SSIS and ETL concepts involving data extraction, transformation, and loading from source systems into SQL Server staging and target tables.
- Participated in project-oriented training based on the PLZ Corp business environment, working with existing database objects and ETL processes to understand business logic, data dependencies, and real-world data processing workflows.
- Monitored ETL job execution, identified successful, failed, or incomplete processes, performed data load validation, compared source, staging, and target data, and supported basic investigation of job failures.

PROJECTS

End-to-End Sales Data Warehouse

SQL Server — SSIS — Data Warehousing

- Designed and implemented an end-to-end Sales Data Warehouse using SQL Server for Customers, Products, Stores, and Sales data.
- Created staging tables to load and prepare source data before transformation and loading into the final Data Warehouse.
- Designed Customer, Product, and Store dimension tables using surrogate keys and created a Sales fact table based on the defined business grain.
- Developed Stored Procedures to transform and load data from staging tables into dimension and fact tables.
- Implemented dimension change handling using MERGE, effective dates, and active record indicators.

- Loaded fact data by joining staging records with active dimension records to retrieve the appropriate surrogate keys.
- Applied Data Warehouse design principles including Star Schema, staging, dimension loading, fact loading, table relationships, and data validation.
- Followed a structured ETL process from source data through staging and transformation to final dimension and fact tables.
- **Live Application:** sales-data-warehouse

Diet Recommendation System

Python — Pandas — Scikit-learn — Streamlit

- Independently designed and developed a Machine Learning-based Diet Recommendation System from data preparation through application deployment.
- Performed data preprocessing, data cleaning, feature preparation, and feature scaling for Machine Learning model development.
- Applied Machine Learning techniques and model evaluation methods to generate personalized diet recommendations.
- Used cross-validation and hyperparameter tuning to evaluate and improve model performance.
- Developed an interactive Streamlit application that accepts user input and generates real-time diet recommendations.
- Deployed the application using Streamlit Cloud.
- **Live Application:** Diet Recommendation System

EDUCATION

Master of Computer Applications (MCA)

2023 – 2025

Sanketika Vidyaparishad Engineering College

Bachelor of Science in Computer Science

2018 – 2021

Sri Venkataramana Degree College

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Python Essentials – Great Learning
- SQL & Databases – Great Learning
- Exploratory Data Analysis with Python – Kaggle
- Official internship certificate from JASP Labs
